

# Paul Isaboke

- **D.O.B:** Sep/7/2009
- **Favorite Subject:** Mathematics
- **Career Ambition:** Aeronautical Engineer

At 16, Paul is a young man with big dreams and a heart full of determination. His love for mathematics goes beyond just a subject; it's a gateway to his ambition of becoming an aeronautical engineer. Growing up in a modest home with his four siblings, Paul faces many hardships, but his drive to succeed remains unwavering. Despite the challenges his family endures, including difficult living conditions and financial instability, Paul has always been the kind of student who embraces learning with open arms. His quiet strength, resilience, and passion for education make him stand out, and he's determined to use his education not only to change his life but to give his family a better future.

At just 16, Paul dreams of a career that would allow him to reach new heights literally. With a deep love for mathematics, Paul aspires to become an aeronautical engineer, a career he sees as his chance to elevate his family out of the difficulties they currently face. Despite his young age, Paul's sense of responsibility and ambition sets him apart as he navigates the daily challenges of life in a modest two-roomed house with his parents and four siblings.

Life at home is often difficult. The house lacks basic amenities like a bathroom and toilet, forcing the family to pay each time they need to use these shared facilities, which only adds to their financial strain. Rainy seasons bring a fresh wave of difficulties, as leaks in the roof allow water to seep in, while raw sewage from an exposed sewer line right outside their front door infiltrates the home, making their living conditions uncomfortable and unsafe

Paul's parents work tirelessly to provide for the family, though their jobs are physically demanding and offer little financial stability. His mother, Risper, works as a security guard. A challenging role, especially for a woman, while his father takes on any construction work he can find as a casual laborer. Despite their efforts, the family's income is unpredictable, and meeting even basic needs is a struggle

Despite the challenges, Paul remains steadfast in his pursuit of education, driven by his dream of studying aeronautical engineering. He sees education as his only chance to transform his life and create a stable future for his family. Paul's goal is not just a career aspiration but a lifeline for his entire family—a way to lift them out of poverty and create opportunities that his parents have not had.

At The Mirror of Hope, we believe education is the best chance young aspiring students like Paul have to fight the poverty and great struggle that surrounds them. We believe if given a chance, these children can go on to make significant difference in their lives, that of their families and the whole community in the long run.

We therefore ask you to consider sponsoring/fundraising for this cause so that through you a student can get the exceptionally rare chance to go to school and avoid becoming another mere statistic of young, full of potential children in the slum who can't simply afford an education, and end up to throw their lives apart.

Many thanks and best wishes from all of us at The Mirror of Hope!
